

- Users will have to Register/sign in if they want to access the website.
- Students and Business are allowed to sign up while administrators and Facilitators will have to be given access through the code.
- Students will have to use their student email in order to register
- Students can sign up to a newsletter for a specific course where they will be notified when a new job has been posted within their stream.
- A student can only have one account
- A business can only have one account
- A business can make many posts
- A student can apply to many posts
- Users need to be able to report a bug.
- System should only allow for users to upload Pdfs and word documents
- Once a student uploaded their CV onto the post, they should not be allowed to upload again, however if the business had not viewed the CV already they are allowed to edit their submission e.g. Re-upload CV.
- A Student's profile should have a place for a LinkedIn, portfolio, Github etc.
- Students must agree to wave POPI act rights when signing up
- Businesses must agree to POPI act rights and not using students details for any miscellaneous activities
- Applications need to be mobile friendly too.
- Students, Businesses, Co-ordinators and Admin users all have to have different interfaces.
- Student should be notified when a company wants to reach out to them
- Businesses should be able to send emails out via the application, e.g. a successful message or a decline to students who are unsuccessful. This option should not CC students into one email as information like that would be private. Instead the system should send out each email privately.

- Students who have been placed should not be allowed to apply at other companies, as such when a student has been placed they notify the placement manager at CPUT and said manager can disable their ability to apply to other companies, if they leave said person can once again re-enable the functionality once more
- Companies should be able to link students to a test which they could take on an external website. (Maybe create a way for them to be able to set it up on the Potal?)
- Students should have a search button which allows for them to filter jobs by the course which they are made for.
- Students should be allowed to apply with the CV and cover letter on their profile or to submit a new one to the company from their device.
- Students should be able to track their applications, “Submitted”, “Viewed”, “Success/Unsuccessful” stage.
- Error handling is needed in the case where a company is unable to post a job, students are unable to apply for an internship etc.
- Businesses will be able to filter through students, e.g. Work experience, age, skills, alphabetical, submission time etc.
- Once a job has closed, students who did not submit a CV could be given 24 to 48 hours to request a late submission link from a business where the business could allow late submissions
- Submission links should be allowed to be changed. Students who applied will be notified of the change made to the post.

Only students within their third year should be able to register for the website, meaning that the students after registering have their account automatically removed after the year ends.
